CRESTRON®

Statement of Memory Volatility for CP3N

Volatile and non-volatile memory information/configuration:

Type of Memory	Size of Memory	Purpose of this Memory	Data retention after power off **Note 1**	User data **Note 2**	How is data input to this memory?	How is memory protected from accidental overwrite by the user? (e.g. Password, Jumpers, Switch settings, Software) - Enter N/P if it can't be write protected.
1.EEPROM	1 Mega Bits	System Config	Yes	No	Special software required	Software
2.SDRAM	512 Mega Bytes	Temporary Storage	No	No	Special software required	
3.SRAM	144 kilo Bytes	Temporary Storage	No	No	Special software required	
4.SRAM	132 kilo Bytes	Temporary Storage	No	No	Special software required	
5.FLASH PROM	1 Mega Bytes	Firmware	Yes	No	Special software required	
6.SD CARD Internal (FLASH Memory)	4 Giga Bytes	Firmware	Yes	Yes	Special software required	N/P
7.SD CARD External (SD Card slot) (SD CARD not included)	32 Giga Bytes MAX	User Storage	Yes	Yes	Special software required	N/P

Note 1: Can user data, i.e. Audio, Video, documents (Word, pdf etc.) or spreadsheet retain after power down?
Note 2: Can user data, i.e. Audio or Video, documents (Word, pdf etc.) or spreadsheet be written to this memory during normal operation? User settings and operational parameters such as volume setting, IP address etc. are not considered User data on this declaration. Only Audio, Video, documents (Word, pdf etc.) or spreadsheet is considered user data.

Michael Timonirson   04-02-2015
