

Statement of Memory Volatility for DM-TX-100

The DM-TX-100 is a DM CAT transmitter that provides a single HDMI input for a computer or high-definition AV source. It uses the following memory types: EEPROM, FLASH PROM and SRAM. The memory used in this unit holds only firmware, operational parameters and user presets. No user audio/video data is retained in memory upon power down.

See table below for memory type and Volatility:

MEMORY TYPE	VOLATILITY	USER DATA
EEPROM (CPU)	Non-Volatile	NO
EEPROM(EDID)	Non-Volatile	NO
FLASH PROM (FPGA)	Non-Volatile	NO
FLASH PROM	Non-Volatile	NO
SRAM (CPU)	Volatile	NO
