

Statement of Memory Volatility for DM-TX-201-S

DM-TX-201-S Provides a remote input connection for HDMI and RGB sources as part of a complete DigitalMedia System. It uses the following internal memory types: EEPROM and FLASH PROM. The memory supplied with this product holds only firmware, operational parameters and user presets. No user audio/video data is retained in memory upon power-down.

See table below for memory type and Volatility:

MEMORY TYPE	VOLATILITY	USER DATA
SD CARD	Non-Volatile	YES
FLASH PROM	Non-Volatile	YES
