

Management Portal for XiO Cloud® Service

- *Manage and launch authorized customer accounts from a central, secure location*
- *Assign or revoke employee access to customer accounts*
- *Use a single set of login credentials for all accounts*

The XiO Cloud Management Portal provides Authorized Resellers and Crestron Service Providers (together, Authorized Support Providers) with the ability to easily view and access their customers' XiO Cloud accounts¹. Support providers can access the XiO Cloud Management Portal and create a portal account for their organization directly through their Crestron.com web account.

Centralized Account Management

Once a customer authorizes the support provider to access their account, that account can be viewed and managed from within the XiO Cloud Management Portal. All authorized customer accounts are provided in one central location within the portal. The support provider can view the status of a customer account or can launch directly into the account without requiring any additional credentials.

Manage and Control Employee Access

The XiO Cloud Management Portal solves the challenges that admin users face managing employee access to customer accounts through the portal. Employees are assigned admin or user roles for the XiO Cloud Management Portal from within a Crestron.com web account. Admins can then assign or revoke access to customer accounts for each portal user, simplifying user management and preventing unauthorized access.

Single Login Credentials

Support providers can access the XiO Cloud Management Portal and authorized customer accounts using their Crestron.com web credentials, which eliminates the need for support providers to maintain different usernames and passwords for all of their managed customer accounts.
